

Legionella and Water Management

With over 10 years' experience working across the UK, Ireland and the Channel Islands ASAP offer comprehensive Legionella and Water Management services delivering within budget, on time every time.

If you are the 'responsible person' (employer, self-employed or landlords) or someone in control of premises, you must understand the health risks associated with legionella. Any water system with the right conditions could be a source for legionella bacterial growth. Most commonly these are located in cooling towers and evaporative condensers, hot and cold water systems, spa pools, humidifiers, air washers and emergency showers.

Our recognised industry professionals can work with you to help you understand how to:

- ✓ Identify and assess sources of risk/manage any risks
- ✓ Prevent or control any risks
- ✓ Keep and maintain the correct records
- ✓ Carry out any other duties you may have in relation to water or legionella
- ✓ Advise on the effective management of your premises or sites
- ✓ Provide supporting documentation templates

Statute requires the 'responsible person' to take responsibility for identifying and assessing the risk of exposure to Legionella Bacteria from work activity or from water systems on the premises.
