

Fire Safety Compartmentation Surveys

With over 12 years' experience working across the UK and Ireland. ASAP offer comprehensive Fire Safety Services delivering within budget on time every time.

Sub-dividing buildings into a number of compartments can restrict the spread of fire and smoke. Effective compartmentation is one of the most effective means of protecting premises and people.

Why consider a Compartmentation Study?

1. A building may have been reconfigured during refurbishment
2. New or replacement services may have been installed leaving gaps in walls and ceilings
3. To be sure that your building changes have not compromised Fire Safety

We will:

- ✓ Review all available documentation including: Drawings, Fire Strategy Documents, and Inspection Records
- ✓ Visit and survey the Compartmentation of the building
- ✓ Identify and document the fire-resisting construction, its status, any issues relating to sealing and materials used, including hard to reach areas such as ducting or behind suspended ceilings.
- ✓ Identify corrective works to preserve the design integrity and compartmentation
- ✓ Project Manage these works if needed

If you suspect that the integrity of your Compartmentation has been compromised, this will provide you with an independent and professional baseline from which to make improvements to restore the integrity of each designed area.
